

Capital F

1. Slant down (with a slight curve) to the baseline, then curve left and up into a small hook that ends pointing right, about a third of the way up.
2. The top: start to the left of the stem a little below the topline, curve up and over to the right in a shallow wave across the top, ending to the right of the stem.
3. Slide right: a short bar across the stem at the midline.

Lowercase f

1. Swing up to the topline and loop back to the left.
2. Slant straight down through the baseline to the descender line.
3. Loop back (in this font the lower loop turns to the left) and come up to close against the stem about halfway up the short letters' height.
4. Finish with a short stroke to the right from that point.

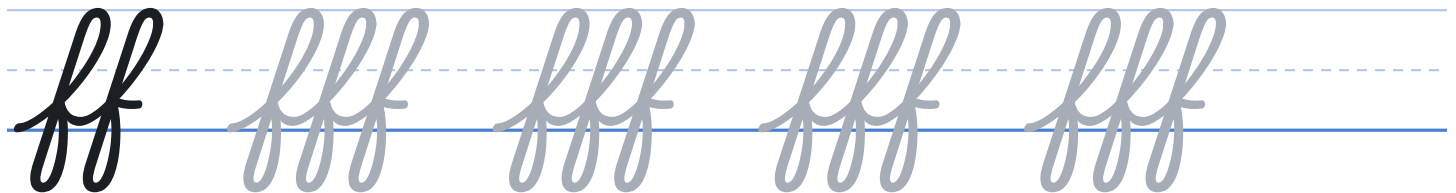

Second form of F

1. The top: make a small loop at the top left, then wave across the top to the right.
2. Start on the top stroke and slant down (with a slight curve) to the baseline, then curve left and up into a small hook that ends pointing right.
3. Slide right: a short bar across the stem at the midline.

Trace and write capital F

Trace and write lowercase f
